Purpose:

The purpose of this website is to generate a portfolio website such that future employers will be able to view my projects and work that I have done over the course of my web development careers.

Functionality / Features:

There are different features have included in the portfolio website. These include:

- a navigation bar that is converted into a hamburger menu when shrunk to mobile form
- alternating lists of components (ie. in the Projects page)
- list of blog posts with wrapping functionality
- overlay hover for index page

Target audience:

Employers looking for web development, inspiration for future web developers' portfolio websites

Tech stack (e.g. html, css, deployment platform, etc):

- To design website: HTML, CSS, SASS, Flexbox
- Repository hosting: Github
- Deployment platform: Netlify
